WORKSHEET 3 — MY WORK TRIANGLE

What is the length of your kitchen work triangle? To determine the length of the triangle, add the distances from the center of the range-top to the center of the sink, the center of the sink to the center of the refrigerator, and the center refrigerator back to the center of the range-top. Enter your figures in the chart below and compare your measurements to the ideal measurements.

Between _____	Ideal Measurement	My Measurements
Range-top to Sink	4 to 6 feet	_____
Sink to Refrigerator	4 to 7 feet	_____
Refrigerator to Range-top	4 to 9 feet	_____
TOTAL	22 Feet (Maximum)	_____

(Draw your triangle and add the measurements on your Kitchen Layout—Worksheet 2)

Do you need to relocate an appliance? Do you have room to add an island? If you add an island, you will need to plan for a source of electricity (and gas—if your range-top calls for it) and water if you are including a sink.
